BUSINESS NEED
Client had an aging infrastructure in need of a refresh. Client wanted to use as an opportunity to drive down costs and increase functionality.

SOLUTION
Eclipsys leveraged our Senior Database Administrators, our Engineered Systems Specialist and Infrastructure Specialists to build an Oracle on Oracle solution.

RESULT
Cogeco now has an optimized database environment and a consolidated infrastructure, which is showing them an increase in functionality and an increase in performance for the application tier.

ECLIPSYS HELPS COGECO OPTIMIZE THEIR DATABASE ENVIRONMENT WHILE LOWERING OPEX COSTS AND INCREASING APPLICATION TIER PERFORMANCE

Cogeco's SPARC infrastructure was aging and needed to be refreshed. This infrastructure ran their Oracle DB and mission critical applications and the architecture did not include High Availability or Disaster Recovery.

COST/COMPLEXITY CHALLENGE

As part of the refresh project Cogeco wanted to drive down OPEX Costs, reduce complexity and increase functionality.

SOLUTION

Eclipsys conducted a TCO analysis of their current environment and provided a solution roadmap to consolidate onto new SPARC hardware and to leverage Oracle advanced DB options including Diagnostic & Tuning packs and Oracle Lifecycle management. This analysis was presented to Cogeco senior management including CIO & Director of IT.

The solution roadmap included a thorough review of current state to future state, gap and recommendations (Optimization, priorities and risk), maturity model and KPIs, and ROI of different models.

The transformation included the following components:

Defined Scope: Database Consolidation and Optimization

Defined Goals: Drive down Costs, Increase Business Agility and Improve Service Levels

Defined Objective: Transform IT into Business Value Enable

To complete the analysis & the sizing of the environment and Eclipsys leveraged our Senior Database Administrators, our Engineered Systems Specialist and Infrastructure Specialists to build an Oracle on Oracle solution.

RESULTS

Working collaboratively with the customer Eclipsys provided the final architecture which included repurposing existing servers and purchasing new T5 SPARC servers. The architecture now includes the distribution of the DBs two primary sites and two Disaster Recovery Sites. Eclipsys Consulting Services will provide technical and project management oversight and the migration services.

Cogeco is very pleased with the results as they achieved their objective to optimize the DB environment by consolidating infrastructure, increase functionality and increase performance for the application tier.

ABOUT ECLIPSYS

Since 2009 we have worked with private and public sector clients to successfully address their most complex business challenges through highly innovative, flexible and customizable solutions and services that integrate business processes and information technology.

Eclipsys is an Oracle Platinum Partner, globally recognized as one of the highest levels of distinction within the Oracle Partner Network, and has one of the largest Oracle exclusive practices in Canada.

"We deliver award winning custom IT solutions and specialized services to Canadian Enterprises. Our success comes from enabling our customers to achieve maximum business value from their investment in Oracle technologies."
